

CASE STUDY: HEALTHCARE PLATFORM + GOVERNMENT DATA ANALYTICS

Public Version — Confidential Details Protected by NDA

Client: Healthcare Organization + Government Entity (Ecuador/USA)

Role: IT Consultant & Data Architect

Period: 2025 – 2026

Technologies: PHP, SQL Server, Power BI, RapidMiner, ETL

THE CHALLENGE:

Unify patient management in a healthcare organization while simultaneously processing 200,000+ social benefit records for government policy decision-making.

THE SOLUTION IMPLEMENTED:

- Full-stack healthcare web system (PHP + SQL Server) with patient management, appointment scheduling, and billing modules
- ETL pipeline for data cleaning and transformation of massive datasets
- Interactive Power BI dashboards with automated refresh
- Server migration and administration (XAMPP/Dell) ensuring high availability

KEY RESULTS:

- 200K+ records processed with statistical validation in RapidMiner
- Executive reporting time reduced from 3 days to real-time
- System in active production throughout 2026

⚠️ CONFIDENTIALITY NOTICE:

Specific details, institutional names, and sensitive data have been omitted in this public version. The complete system, backoffice, and dashboards are available for demonstration upon request and NDA signing.
